Summary

Full Stack Engineer with 5+ years building C/.NET microservices, REST APIs, and SQL Server-backed systems in enterprise settings. Hands-on with Clean Architecture, Domain-Driven Design, CQRS for modernizing legacy systems. Proficient with AI coding assistants (GitHub Copilot, Claude Code) and cloud-native deployment across Azure and AWS.

Experience

Capital One

Apr 2024 – Present

Software Engineer (Senior Associate; Promoted) — C#, CQRS, Java, SQL Server, AWS, NUnit, Python Chicago, USA

- **Co-designed REST APIs** with frontend engineers using **React and TypeScript** to power customer-facing workflows supporting **200K+ concurrent users**, improving latency and user experience.
- **Optimized API contracts and data models** for **TypeScript/React** clients, **reducing client-side rework by 35%** and accelerating feature delivery across Agile sprints.
- **Integrated a GenAI/LLM workflow** to auto-classify CI/test failures and suggest owners; applied **prompt engineering** to improve classification accuracy and **reduce manual triage time**.
- **Refactored complex SQL Server stored procedures** into smaller, testable units; applied **query tuning, execution plan analysis, and indexing strategy** (clustered/non-clustered) to improve data access on multi-million row tables.
- **Improved release quality** by expanding **unit + integration test automation** and strengthening **CI/CD pipelines**, reducing defects by **30%** and shortening release cycles by **40%**.
- **Applied Domain-Driven Design** principles — bounded contexts, aggregates, and repositories — to define clear service boundaries and well-versioned REST API contracts (OpenAPI/Swagger).
- **Partnered cross-functionally** with Product, Design, and Infrastructure teams to deliver high-impact features within a scalable distributed architecture, driving execution across stakeholders.

S&S Activewear

June 2023 – Apr 2024

Software Engineer — C#, .NET, Azure CosmosDB, SQL Profiler, Kubernetes Chicago, USA

- **Developed and maintained .NET microservices and REST APIs** powering a high-traffic eCommerce platform processing **thousands of orders/day** with low-latency, highly reliable distributed execution.
- **Applied strangler fig and facade patterns** to refactor monolithic .NET components into modular microservices, isolating legacy dependencies and enabling incremental migration without service disruption.
- **Refactored monolithic .NET components into modular microservices** with **CI/CD pipelines**; collaborated with API architects, DevOps, QA, and product owners in Agile sprints.

DXC Technology

Jan 2020 – Jan 2022

Software Engineer — Java, React.js, Dapper, Airflow, AWS, NUnit Bengaluru, India

- Architected and deployed backend services on **Azure** (App Services, Azure SQL, Blob Storage) with **API Management** for rate limiting and routing, reducing API error rates by **25%** and improving integration reliability.
- **Optimized SQL Server performance** via query tuning, indexing, caching, and async workflows — improving checkout performance by **35%**; used **SQL Profiler** and Application Insights for diagnostics.
- **Led delivery of customer-facing booking workflows** used by **60K+ users** with clean, testable architecture; deployed and managed applications on **AWS** with monitoring and troubleshooting.

Technical Skills

Certifications: Azure Developer Associate, AWS Developer Associate, AWS AI Practitioner

Languages & Frameworks: C#/.NET, ASP.NET Core, Java, Spring Boot, Python, TypeScript/JavaScript, SQL, Go

Frontend: React.js, TypeScript, HTML/CSS, Responsive UI Development

Cloud & DevOps: Azure (SQL, Functions, App Services, DevOps, Application Insights), AWS (Lambda, S3, DynamoDB), Docker, Kubernetes, CI/CD, Blue/Green, Feature Flags

Databases: SQL, Azure CosmosDB, DynamoDB, PostgreSQL, MongoDB, Cassandra

AI Tools: GitHub Copilot, Claude Code, Cursor, Prompt Engineering, GenAI/LLM Integration

Education

SUNY – Stony Brook University

Jan 2022 – May 2023

Master of Science in Computer Science – 4.0/4.0

Stony Brook, NY

Projects

E-commerce Platform | React, Node.js, .NET, Kubernetes, TensorFlow, SQL

Apr 2022

- Built a full-stack e-commerce app with **React, Node.js, REST APIs, JWT/OAuth** auth, product catalog with filters/sorting/pagination, admin panel, **Jest** tests, and an **AI chatbot** deployed on **Kubernetes**.

Climate Change Impact Analysis (UN SDG Goal-13) | PySpark, PyTorch, TensorFlow, GCP

Feb 2023

- Processed 30 GB via **GCP DataProc/PySpark**; built **LSTM** model (MAE 1.45); developed **Locality Sensitive Hashing** for facility clustering and correlation analysis with climate variables.
